## MODERNIZATION

The Board noted that certain legacy incident tracking systems continue to be in use to track security incidents. The Board was asked to specify how these legacy systems were being used to support the delivery of global solutions.

## TRANSFORMATION

The Board noted that the phase I of the project for application rationalization / consolidation

is currently in progress. The Board noted that the project team has identified a number of challenges, including the need to migrate legacy systems to the cloud, the need to integrate data from multiple sources, and the need to modernize existing systems. The Board also noted that the project team is working on a plan to address these challenges and to deliver the intended outcomes. The Board further noted that the project team is working closely with stakeholders to ensure that the project is delivered successfully.
