Excellency, Secretary-General of the United Nations.

Distinguished

Ladies and gentlemen,

Officials;

Delegates,

Representatives,

Guests,

Friends,

Others,

and

Others,

and overtime, provided support to those in need, and
equally, of helping people. This study suggests that

there is a significant relationship between the two.

Follow-up studies are needed to examine this issue.

However, it is important to note that the results of this study

are limited by the fact that the sample size was small and the participants were mostly from one country. Future research should consider larger samples and include participants from different countries and cultures.

Overall, the findings of this study suggest that the relationship between social support and mental health is complex and may vary depending on the context. Future research should explore this relationship further and consider other factors that may influence mental health.

Conclusion: The findings of this study suggest that social support is associated with mental health outcomes. However, the relationship is complex and may vary depending on the context. Future research should explore this relationship further and consider other factors that may influence mental health.

As a Rwandan experiencing long distance travel, I am faced with a set of challenges.

et.

Traveling by road, I must constantly be aware of my surroundings, including migration into an asset.

...and so on.

I thank the African group

for their support.
