

along the migratory route in the United States, according to this study.

"We found that the number of consultations increased significantly during the peak of the migration season, which occurred between April and June," says Dr. Michael J. Kullgren, lead author of the study and a medical student at the University of Michigan. "This was particularly true for those who had never been to the United States before." The researchers also found that the number of consultations increased significantly during the peak of the migration season, which occurred between April and June.

According to Dr. Kullgren, the findings suggest that more attention should be given to the needs of migrants during the peak of the migration season.

"Our findings indicate that more attention should be given to the needs of migrants during the peak of the migration season," says Dr. Kullgren.

According to Dr. Kullgren, the findings suggest that more attention should be given to the needs of migrants during the peak of the migration season.

"Our findings indicate that more attention should be given to the needs of migrants during the peak of the migration season," says Dr. Kullgren.

According to Dr. Kullgren, the findings suggest that more attention should be given to the needs of migrants during the peak of the migration season.

"Our findings indicate that more attention should be given to the needs of migrants during the peak of the migration season," says Dr. Kullgren.

According to Dr. Kullgren, the findings suggest that more attention should be given to the needs of migrants during the peak of the migration season.
