

*As duty bearers, policymakers should ensure that digitally enabled health systems and digital health technologies are accessible and available to all, are of good quality, and do not cause financial hardship*

*Increase donor funding to support developing country governments to develop and implement innovative digital tools and data-driven decision-making for overall health system strengthening.*

*Prioritize digital health tools and approaches that are simple and can be readily utilized providing the biggest benefits for people's health.*

*Invest in and support young people's ideas and digital health innovations.*

*Convene cross-sectoral partnerships with national governments, private sector actors, and grassroots and faith-based organizations, to forge an innovative, global movement to bridge the digital divide while emphasizing the role and value of youth as thinkers and leaders*

#### **Chapter IV. Youth and future generations**

*Prioritize young people's input at every level of development, focusing on developing their agency and power as both innovators and end users of development products.*

*Prioritize funding innovation by youth, youth start-ups and/or youth-led organizations—who are unlikely to have significant capital resources or access to mainstream lines of credit.*

*Promote and fund youth-led organizations, including facilitating platforms for sharing knowledge, tools and interventions.*

*Leverage the unique role and positionality of youth constituencies, actively engaging them at every level of the digitization process.*
